VPN-

Virtual Private network

It allows to hide your IP address and geographical location by tunnelling your entire internet connection

Through another server.It is not only privides you with privacy security and anonymity when suffering the web but also allows you to gain access to restricted websites and allow you bypass certain filters'

Vpn is encrypted with military grade codes,you can search the web freely knowing full well that you are protected both from hackers and ISP gov who may want to come sniffing aroung you connection to see what your doing.

What are the Benefits of Using a VPN?

Neglect geographic restrictions online and make more of cross-country content

Watch more of your streaming media like Netflix and Hulu (Yes! more movies & series)

Protect yourself from snooping on untrustworthy Wi-Fi hotspots

Gain some anonymity online by hiding your true location & IP address

Protect yourself from being logged while torrenting.
